62mm 4.0L Jeep Throttle Body for '05-'06

A simple fact in creating horsepower is the need for air which is exactly why Painless Performance developed the PERFECT Throttle Bodies. Our newest addition to our Jeep offerings is a 62mm model for the '05 – '06 to replace the restricted factory version on 4.0L engines.

The Hi-Velocity Throttle Body, #65302, is CNC machined from billet aluminum creating a precision housing with a 62mm outlet increasing the amount of air flow into the intake manifold. The increase in size is enough to flow nearly 600-cfm (a 50% increase!) over the factory unit.

The PERFECT Throttle Body bolts right in place and is supplied with matching factory connectors and linkage making it one of the most effective bolt-on parts you can add to your Jeep.

- Billet aluminum construction for precision and anodized black for durability
- 62mm housing flows up to 600-cfm for improved performance on stock engines
- Supplied with hardware for an easy and complete installation
- Other models also available for ['91-'04](#) and '05-'06 4.0L engines
